MediaInterface Dresden and SVOX present speech output solution SpeaKING[®] CheckReporter

MediaInterface Dresden and SVOX launched for CeBIT 2006 the SpeaKING[®] CheckReporter. This innovative voice control solution for mobile devices simplifies technical work processes, like the execution of control and test tasks during a car check.

Zurich, March 8, 2006.

MediaInterface Dresden's new product development, the SpeaKING[®] CheckReporter, is a voice controlled system for the mobile execution of control and test tasks like those done during a car check. Engineers usually do not have a free hand since they need to operate the test object, fill in a detailed check plan, and keep track of the findings.

SpeaKING[®] CheckReporter is used in a mobile device like a PDA. During the test, the device will read the check plan step-by-step to the Engineer. The execution of each checking step has to be stopped by a speech command. At the same time, the tester can dictate his evaluation results to the device, which will record them. At the end of the test, the results are transferred from the mobile device to the computer and SpeaKING[®] CheckReporter generates a complete and print-ready report from the collected data and the speech recordings on the PC.

On the PDA, the interaction with the SpeaKING[®] CheckReporter is multimodal. This means that the data entry and the navigation in the system occur through speech input or touch screen. System reactions are done through speech output and read aloud on the PDA display. When choosing the right Text-to-Speech-Software, MediaInterface Dresden decided on SVOX Mobile because of its excellent intelligibility. Indeed, in rooms where the noise level is constantly changing, a loud and clear voice is a must.

MediaInterface Dresden GmbH is present at CeBIT on the Sachsen joint booth, Halle 4, Stand F 60. You will find SVOX in Halle 11, Stand D35.

About SVOX AG

SVOX AG is a leading provider of embedded speech output solutions for the automotive and mobile device industries. SVOX's core product is the SVOX Text-to-Speech system. The company makes computers and other electronic devices talk by converting written text into natural-sounding and easily comprehensible speech. Its focus on embedded speech allows for specifically optimized solutions. Therefore, SVOX speech applications are small, fast, and multilingual. With SVOX's software architecture, customers are offered a speech engine that can be easily tailored to their technical requirements and market needs.
